Designation: Assistant Professor

ABSTRACT Introduction

In today's fast-paced world, managing personal finances is very important. A Personal Expense Tracker is a tool that helps individuals record, monitor, and analyze their daily expenses. This project is developed using Microsoft Excel, which provides powerful features like formulas, functions, and charts for data analysis.

The main aim of this project is to maintain a systematic record of expenses and gain insights into spending habits.

Objectives

- To record daily expenses in a structured format
- To categorize expenses such as Food, Transport, Bills, etc.
- To calculate total and average expenses
- To identify highest and lowest spending
- To analyze spending patterns
- To help in better financial planning

Tools Used

- Microsoft Excel
- Excel Formulas and Functions
- Basic Data Analysis Techniques

Dataset Description

The dataset consists of **15–20 rows of expense records** with the following fields:

- **Date** – Date of transaction
- **Category** – Type of expense (Food, Transport, Shopping, etc.)
- **Description** – Details of expense
- **Amount** – Money spent
- **Payment Mode** – Cash, UPI, Card

Additional calculated fields:

- Total
- Average
- Maximum
- Minimum
- Count
- CountA
- Type (High/Normal)
- Rounded Value
- Category Count
- Category Total

Formulas Used

The project uses the following Excel formulas:

1. SUM

Used to calculate total expenses

=SUM(D2:D20)

2. AVERAGE

Used to calculate average spending

=AVERAGE(D2:D20)

3. MAX

Finds highest expense

=MAX(D2:D20)

4. MIN

Finds lowest expense

=MIN(D2:D20)

5. COUNT

Counts number of numeric entries

=COUNT(D2:D20)

6. COUNTA

Counts non-empty cells

=COUNTA(A2:A20)

7. IF

Classifies expenses

=IF(D2>1000,"High","Normal")

8. ROUND

Rounds values

=ROUND(D2,0)

9. COUNTIF

Counts frequency of each category

=COUNTIF(B2:B20,B2)

10. SUMIF

Calculates total per category

=SUMIF(B2:B20,B2,D2:D20)

Data Analysis

The data was analyzed using Excel formulas to extract meaningful insights:

- Total monthly expenses were calculated using SUM
- Average spending per transaction was found using AVERAGE
- Maximum and minimum expenses helped identify spending extremes
- COUNT and COUNTA were used to determine number of entries
- COUNTIF helped identify most frequent category
- SUMIF calculated total expenses for each category
- IF function classified expenses into High and Normal

Results

- Food and Shopping categories contributed the highest expenses
- Digital payment methods (UPI/Card) were used more frequently
- Some high-value transactions were identified
- Spending patterns showed frequent small expenses

Interpretation

From the analysis, it is clear that tracking expenses helps in understanding where money is being spent. Frequent expenses in certain categories indicate areas where budgeting is required.

Conclusion

The Personal Expense Tracker is an effective tool for managing daily expenses. It helps in organizing financial data, analyzing spending habits, and making informed financial decisions. Excel proves to be a powerful tool for such analysis.

Output

Date	Category	Description	Amount	Payment Mode	Count	Type	Rounded	Category Count	Category-wise Total
01/04/26	Food	Lunch	150	Cash	30	Normal	150	14	2770
02/04/26	Transport	Bus	50	Cash	30	Normal	50	5	400
03/04/26	Shopping	Clothes	1200	Card	30	High	1200	4	3100
04/04/26	Bills	Electricity	800	UPI	30	Normal	800	4	1800
05/04/26	Food	Dinner	200	Cash	30	Normal	200	14	2770
06/04/26	Entertainment	Movie	300	Card	30	Normal	300	3	999
07/04/26	Transport	Auto	100	Cash	30	Normal	100	5	400
08/04/26	Food	Groceries	900	UPI	30	Normal	900	14	2770
09/04/26	Bills	Internet	700	UPI	30	Normal	700	4	1800
10/04/26	Shopping	Shoes	1500	Card	30	High	1500	4	3100
11/04/26	Food	Snacks	100	Cash	30	Normal	100	14	2770
12/04/26	Transport	Cab	250	UPI	30	Normal	250	5	400
13/04/26	Entertainment	Games	400	Card	30	Normal	400	3	999
14/04/26	Food	Dinner	300	Cash	30	Normal	300	14	2770
15/04/26	Bills	Water	300	UPI	30	Normal	300	4	1800
16/04/26	Food	Party	1000	UPI	30	Normal	1000	14	2770
17/04/26	Shopping	Accessories	400	UPI	30	Normal	400	4	3100
18/04/26	Entertainment	Netflix subscription	299	UPI	30	Normal	299	3	999
19/04/26	Food	snacks	120	UPI	30	Normal	120	14	2770
20/04/26	Bills	phone bill	899	Cash	30	Normal	899	4	1800
21/04/26	Food	Dinner	580	Cash	30	Normal	580	14	2770
22/04/26	Food	Groceries	2300	UPI	30	High	2300	14	2770
23/04/26	Transport	cab	90	UPI	30	Normal	90	5	400
24/04/26	Shopping	Shoes	2000	UPI	30	High	2000	4	3100
25/04/26	Food	chocolates	1200	UPI	30	High	1200	14	2770
26/04/26	Food	Dinner	80	UPI	30	Normal	80	14	2770
27/04/26	Food	Lunch	150	UPI	30	Normal	150	14	2770
28/04/26	Transport	Cab	350	UPI	30	Normal	350	5	400
29/04/26	Food	Lunch	100	UPI	30	Normal	100	14	2770
30/04/26	Food	Lunch	120	UPI	30	Normal	120	14	2770

TOTAL	AVERAGE	MAX	MIN
16938	564.6	564.6	50

Future Scope

- Add charts and dashboards for visualization
- Automate data entry using forms
- Develop a mobile application

- Integrate with bank transaction data
